

Letrozole

Printed from <https://www.cancerquest.org/patients/drug-reference/letrozole> on 05/16/2024

Brand name: Femara®

IUPAC: 4-[(4-cyanophenyl)-(1,2,4-triazol-1-yl)methyl]benzonitrile

FDA approval: Yes

[Manufacturer Link](#)

Usage:

Letrozole is used to treat postmenopausal women with hormone receptor positive advanced or metastatic breast cancer.

Letrozole is taken once daily in tablet form.[1](#)

- [1](#)Chu, E., & DeVita, V. T. (2015). Physicians' cancer chemotherapy drug manual 2015. Burlington, MA: Jones & Bartlett Learning.

Mechanism:

Letrozole (Femara®) is an aromatase inhibitor that binds to the enzyme preventing its conversion of androgens (sex hormones) into estrogen. This action can prevent growth of hormonal dependent cancers.[1](#)

The diagram below shows the 3D molecular structure of Letrozole.
