

Hydroxyurea

Printed from <https://www.cancerquest.org/patients/drug-reference/hydroxyurea> on 04/19/2024

Brand name: Hydrea®

IUPAC: hydroxyurea

FDA approval: Yes

[Manufacturer Link](#)

Usage:

Malignancies for which hydroxyurea is used include: Melanoma, Chronic myelogenous leukemia, essential thrombocytosis, Ovarian cancer (recurrent, metastatic, or inoperable) and Squamous cell carcinomas of the head and neck. Hydroxyurea is usually administered as an oral capsule.¹

- ¹Chu, E., & DeVita, V. T. (2015). Physicians' cancer chemotherapy drug manual 2015. Burlington, MA: Jones & Bartlett Learning.

Mechanism:

Hydroxyurea (Hydrea®) is thought to inhibit DNA synthesis and prevent cell division, but does not interfere with the production of RNA or protein. Though the exact mechanism of action remains unknown, research suggests that DNA synthesis is blocked by interfering with the activity of an enzyme that is important for the process.¹
